Subject: Application for Full Stack Development / Backend Engineering Roles

Dear Hiring Manager,

I am a final-year **Computer Science and Engineering** student at **Vellore Institute of Technology, Bhopal**, actively seeking opportunities in **Software Development Engineer** and **Full Stack / Backend Engineering** roles. My interests lie in building reliable, production-ready systems that combine strong software engineering practices with scalable web architecture.

I have hands-on experience designing and implementing end-to-end full-stack applications. In my project **VITAS**, I architected a full-stack college event registration platform using **Next.js 13**, **TypeScript**, **Prisma ORM**, and **PostgreSQL**, following industry-standard practices including type-safe environment validation and protected routing via Next.js middleware. I implemented multi-role authentication using **Clerk** and integrated a serverless payment system with **Stripe**, which facilitated a **40% increase in transaction volume** within the first quarter through an improved checkout flow.

Beyond this, I have built production-grade backend systems, as demonstrated by **MailNews** — a full-stack application powered by **Node.js**, **Express.js**, and NLP-based topic classification that delivered personalised news digests to **100+ subscribers**. The system achieved **99.94% uptime** through automated cron-job scheduling and reduced email delivery latency by **35%** via asynchronous queue processing. I also implemented a **CI/CD pipeline** that cut manual release effort by 60% and enabled zero-downtime deployments.

I am comfortable across a broad technology stack including **React.js**, **Next.js**, **Node.js**, **Express.js**, **PostgreSQL**, **MongoDB**, and developer tools such as **Git**, **Docker**, **AWS**, and **Kubernetes**. I am motivated by roles that value **ownership**, **analytical thinking**, and **continuous learning**, and I enjoy working on systems that are scalable, maintainable, and impactful.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my skills and experience align with your organisation's needs.

Best regards,
Krishna Sharma
